

# Science Extra Curricular

Science club is a weekly meeting open to all year sevens after school every Wednesday. Every week students who attend have the opportunity to explore scientific topics by carrying out their own investigations. Some practicals that we have already covered this year include extracting DNA from cheek cells, making slime, and the egg drop challenge. The main aim of Science club is to build every students love for Science and keep them curious all the way through their time at secondary school.
